DETAILED ACTION

Status of Claims

1. Claims 1-10 are pending.
2. Claims 1-10 are rejected.

Information Disclosure Statement

3. The information disclosure statement filed on January 7, 2002 has been reviewed and considered, see enclosed copy of PTO FORM 1449.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1614

6. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyasaka et al. of U.S. Patent No. 4,399,282 possessing an issue date of August 16, 1983. Miyasaka et al. teach of the camptothecin derivatives of general formula I, (see abstract and columns 3 and 4). In addition, Miyasaka et al. teach that the variable of X can be represented by the group CH_2OR_1 , wherein R_1 is represented by an acyl moiety, (see abstract). Miyasaka et al. also teach that these camptothecin derivatives possess excellent pharmacological properties, such as anti-tumor activity, (see column 2 and column 4), which are analogous to the physiological activities of the instant invention. The claims differ from the prior art by not having a carboxylic acid moiety with an amino group. One having ordinary skill in the art would have been motivated to select the claimed compound with the expectation that substitution of a carboxylic acid moiety with an amino group for an alkoxy carbonyl moiety would not significantly alter the analogous properties of the compound of the reference due to the close structural similarity of the compounds.
